

Long Lasting Revolutionary Antimicrobial Coating

up to **90 days**
protection!

Independently Tested

Efficacy has been rigorously tested by independent UK laboratories upto 99.999% Standard methodologies used include: EN 14476, EN 1276, PAS2424:2014

Verifiable Coating

Using our antimicrobial efficacy "blue test" solution you are able to verify that Protect Professional has been installed effectively and periodically check that it is still providing 24/7 protection.

Microscopic Protection

This coating works at the molecular level to covalently bond with the surface it is applied to. This means it is invisible once dry and has no odour.

Active Ingredient

Our coatings technology is based on the use of quaternary ammonium silicone compounds ("SiQAC") as antimicrobial agent

Scientifically Proven & Formulated In The UK

Protect Professional is exclusively distributed by InfectProtect and is formulated and independently tested in the UK by a Queens award winning company, that has operated for over 35 years.

Main Benefits

- ❖ Kills viruses, bacteria and fungi "on contact" and continues to do so for up to 90 days.
- ❖ Kills mechanically rather than chemically, so does not promote mutations within pathogens.
- ❖ Works on both porous and non-porous surfaces, inc. fabric, stone, wood, plastic, glass, metal.
- ❖ No specialist application equipment required and can be applied both inside and outside.

Traditional Disinfectants VS Protect Professional

Traditional Disinfectants Only Work During Use. Protect Professional Provides 24/7 Protection.

Most traditional disinfectants are very good at killing pathogens "on contact" but can only work in a liquid form. Once they have evaporated or have been wiped off, they do not provide any lasting residual protection against bacteria or viruses. This means that within minutes of cleaning, surfaces can easily become infection points again. *On the other hand Protect Professional covalently bonds to the surface and provides lasting protection up to 99.999% and has been tested for efficacy up to 90 days.*

Key: ■ Traditional Disinfectant
■ Protect Professional Antimicrobial Coating

Why Use Protect Professional

- ◆ Provides 24/7 protection of up to 99.999% within 5 minutes of viral or bacterial contact.
- ◆ Does away with the need for excessive and ineffective cleaning regimes.
- ◆ Less chemical usage can save money on both cleaning products and staff time.
- ◆ You would need to disinfect all surfaces every 5 minutes to provide the same level of protection
